Sir:

SUPPLEMENTAL DECLARATION FOR REISSUE PATENT APPLICATION
BY THE ASSIGNEE

COMES NOW Garry L. Ball and declares as follows:

1. I am Senior Vice President Engineering of assignee AGCO Corporation and am authorized to act on its behalf. The entire title to U.S. Patent 5,433,064 issued July 18, 1995, and titled "Rotary Cutter Bed Harvester with Non-Auger Conveying Means for Outboard Cutters", which is the subject of this reissue application, is vested in AGCO Corporation as reflected in the Statement Under 37 C.F.R. 3.73(b) submitted with the reissue application as originally filed.

2. The residence, mailing address and citizenship of the inventors are as follows:

Raymond F. Schmitt, U.S. Citizen
613 Plaza Boulevard
Hesston, Kansas 67114

Cecil L. Case (deceased)

Martin E. Pruitt, U.S. Citizen
101 Meadow Lane
Hesston, Kansas 67062

Michael L. O'Halloran, U.S. Citizen
124 South Roupp
Hesston, Kansas 67062

3. I believe the inventors noted above are the original and first inventors of the subject matter which is described and claimed in Patent 5,433,064 and in the present reissue application as amended by all amendments to date.

4. With the help of counsel I have reviewed and understand the contents of the above identified specification, including the claims, as amended by all amendments to date.

5. At least one error upon which reissue is based is described as follows:
Originally patented claim 1 is anticipated or rendered obvious by DE 3224170 A1 and EP 0358045 B1 which were not considered by the examiner during prosecution of patent 5,433,064. As a consequence, claim 1 is not seen as being patentable without the addition of the following limitations:

1. (previously amended) In a machine for mowing crop materials, the improvement comprising:

a cutter bed including a series of rotary cutters extending across the path of travel of the machine and rotatable about individual upright axes [;],

said cutter bed further including an elongated, transversely extending, generally flat, hollow gear case below the cutters;

a crop discharge opening located behind the cutter bed for receiving severed crop materials from the series of cutters [;];

a pair of transversely extending, oppositely rotating conditioning rolls disposed within and spanning said discharge opening above and behind the cutter bed for conditioning crop materials received from the cutters,

said discharge opening having a pair of opposite ends,

said series of cutters including a group of multiple pairs of intermediate cutters positioned in front of and aligned with said discharge opening with the first and last cutters of said intermediate group being located adjacent said opposite ends of the discharge opening,

said series of cutters further including at least a pair of opposite end cutters located outboard of the first and last cutters of the intermediate group and outboard of said discharge opening;

means for driving the cutters of said intermediate group in oppositely rotating pairs for directing severed material between the cutters of each pair and into the discharge opening,

the first and last cutters of the intermediate group rotating generally inwardly toward the discharge opening across the front of the cutter bed;

means for driving the end cutters in the same direction as their next adjacent first or last cutter of the intermediate group such that the end cutters and the first and last cutters of the intermediate group all rotate generally inwardly toward the discharge opening across the front of the cutter bed[; and] ,

said means for driving the end cutters including gears within said gear case; and

non-auger conveying means operably associated with each end cutter and its next adjacent intermediate group cutter for moving cut crop materials inwardly toward said discharge opening ,

said conveying means including an endless conveyor belt entrained around the axes of rotation of the end cutter and its next adjacent intermediate group cutter,

said conveyor belt having a generally upright, flat, front surface and being driven in a direction to move said front surface toward the discharge opening.

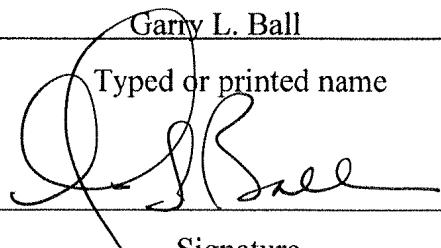

6. I acknowledge the duty to disclose information which is material to patentability as defined in 37 C.F.R. 1.56.

7. Every error in Patent 5,433,064 which was corrected in the present reissue application, and is not covered by a prior oath/declaration submitted in this application, arose without any deceptive intention on the part of the applicant.

8. I hereby declare that all statements made of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under 18 U.S.C. 1001 and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.
